

# PRESSURE SEAL

Trust the UK leader. Integrity is a leading manufacturer of pressure seal products. Our extensive and practical product knowledge, both in production and application, assures you of the highest standards of quality, reliability and expertise.

**INTEGRITY**  
THE PRINT PROFESSIONALS

Pressure seal is a secure, dry-sealed document that's increasingly used in payroll applications. Versatile and cost-effective, it's designed to allow you to process the documents conveniently and inexpensively, using your own standard desktop laser printers.

Integrity can also supply the pressure seal folder/sealer providing you with a complete solution.

## PRODUCT FEATURES

- Available as cut-sheet, single part packs and reels.
- Various fold designs available (see table on reverse)
- Maximum depth 14"
- Maximum width 20"

We also offer pressure seal cheques, with a range of security features to effectively prevent forging or copying.

Other designs in our pressure seal range can incorporate pop-out cards/labels and window mailers.

For those who should want a recycled grade, this is also available.

## Standard sizes

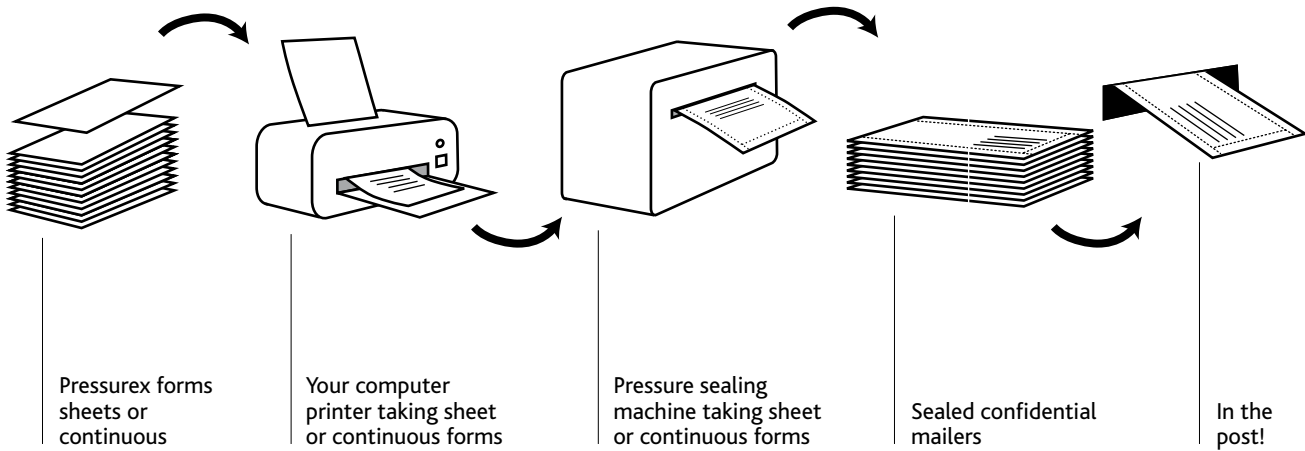

Sheets	Continuous fanfolded packs and reels
8 x 210	12 x 235
11 x 210	14 x 235
11.66 x 210	
12 x 210	
14 x 210

**PRESSURE SEAL FOLD CONSTRUCTIONS**

**Z fold**

The Z fold construction can also be used to conceal four of the six panels. This only requires simplex personalisation with two face panels available for variable information plus the address panel.

**C fold**

The C fold construction can be used to conceal four of the six panels. The personalisation will need to be duplex. This would enable you to use four panels for variable data, i.e. three on the face plus the address on the reverse.

**V fold**

Unlike the C and Z folds, a V fold construction form has four panels on the sheet, i.e. two on each side. This method allows one side of the cut sheet to be concealed.

Personalisation would need to be duplex with the variable print on the face plus an address panel on the reverse.
